(BCA DEPARTMENT)
CS-31 Mobile Application Development in Android using Kotlin
UNIT - 4 Database Connectivity Using SQLite and Content Provider

---

Q-1 Explain Shared Preference.
Q-2 Explain Cursor with suitable example.
Q-3 Write a program to display record in ListView from SQLite.
Q-4 Write a program to load webpage in WebView.
Q-5 Explain Raw Query.
Q-6 Explain Insert() in SQLite.
Q-7 Explain the methods of data storage.
Q-8 What is contract class?
Q-9 Explain schema.
Q-10 How to obtain permission to write to external storage?
Q-11 What is SQLite Database? Explain methods for creating and deleting database records.
Q-12 What is Shared Preference? Explain methods for create, search, read, add, update and delete shared preference.
Q-13 Explain preference Editor.
Q-14 Explain External Storage.
Q-15 Internal v/s External storage.
Q-16 Public files v/s Private files.
Q-17 Develop an android app to define shared preferences.
Q-18 Develop an android app to perform CRUD operation with SQLite database.
Q-19 Create an application to save file on internal storage.
Q-20 Create an application on a given employee table to get user input and store it in application using SQL Helper:
Fields like: empid,employee,empsalary
Also perform read operation on the given table.

Q-Write the following.
(1) Which method is used to retrieve record from SQLite in Android?
(2) What does .apk stands for?
(3) What is use of execSQL?
(4) API stands for_____.
(5) ____ is used to get string values from Shared Preferences.
(6) ____method is used to delete file.
(7) In android, by default, SQLite database save data in.
(8) _____is the recommended way for sharing data across packages.
(9) ____interface is used to write (edit) data in shared preference.
(10) _____ database is used in mobile devices to manage data.
(11) _____ contains the result set of a query made against a database table.
