CS –37 : Machine Learning with Python

UNIT –3 ASSIGNMENT & IMP QUESTIONS.

Q – 1 Explain K-means clustering with advantages and disadvantages.

Q – 2 Describe the Mean-Shift clustering algorithm, including its working, advantages, and disadvantages.

Q – 3 Explain Agglomerative Clustering in detail, including its working steps, advantages, disadvantages, and applications.

Q – 4 What is Vector Quantization (VQ) in clustering,How it Works? And how does it help in data compression?

Q – 5 What is clustering? Discuss the different types of clustering methods with suitable examples.

Q – 6 What is silhouette score?
